Neev Kanwar

(860)-726-6641 | neev.kanwar@gmail.com | www.linkedin.com/in/neev-kanwar

Education:

Boston University, College of Engineering **September 2025 - May 2028**
Major: Mechanical Engineering **Boston, MA**
Minor: Music **GPA: 3.61**

- **Relevant Coursework:** Electric Circuits, Engineering Mechanics, Mechanics of Materials, Energy and Thermodynamics, Electromechanical Design, CAD and Machine Components, Fluid Mechanics, Manufacturing Processes, Stats, Programming.
- **Awards:** Deans List

University of California: San Diego, Jacobs School of Engineering **September 2024 - June 2025**
Major: Mechanical Engineering **La Jolla, CA**

- **Relevant Coursework:** Intro to Engineering, Physics 1(Mechanics), Physics 2(Electricity and Magnetism), Physics 3(Waves, Optics, Modern Physics), Linear Algebra, Differential Equations, Multivariable Calculus. **GPA: 3.91**

Conard High School **West Hartford, CT**

- **Awards:** AP Scholar with Distinction, Honors, Harvard Book Award. **GPA: 4.41**

Experience:

New England Machine Tools **June 2026 - August 2026**
Intern **Bristol, CT**

- Designed and modified a full machine in Autodesk Inventor for custom CNC grinding machines serving aerospace and medical clients, with all parts integrated into production machines, including workheads and guideways
- Gained hands-on experience with tight-tolerance manufacturing requirements and documentation standards for regulated industries including aerospace and medical device production

PL Medical **June 2025 - September 2025**
Intern **Bloomfield, CT**

- Performed checks on radiation monitoring equipment and maintained ISO 17025 quality management systems to ensure compliance with international standards. I also consolidated data from dosimetry audits. Integrated robotic loading.
- Gained proficiency in Excel, as well as working in a manufacturing environment where I became familiar with various industrial machines and automated loading systems.

Projects:

BU Rocket Propulsion Group **September 2025 - Present**
Team Member **Boston, MA**

- Designed propellant feed system components in SolidWorks for liquid-fueled thruster targeting 5000N thrust
- Owned general assembly integration in SolidWorks, coordinating component fit, tolerance stack-ups, and simulation validation across multiple subsystems, and validated geometry through FEA stress simulations
- Coordinated propulsion, electrical, and design subteams, consisting of 6 people, to ensure milestones were met on schedule

BU F1 Tenth Group **September 2025 - Present**
Team Member **Boston, MA**

- Iterated on the aerodynamic body of an autonomous 1/10-scale F1 car in SolidWorks, achieving performance improvements validated through competition, improving the speed of the car by 11%.
- Collaborated with software teams to translate SolidWorks simulation results into parameters for autonomous driving

Skills:

Technical:	**Manufacturing:**	**Research:**
CAD (Solidworks, OnShape, Fusion 360, AutoCAD, Inventor), Solidworks Simulation, Creating/annotating Drawings, R, Python, Java, C++, Excel, SQL, Microsoft Office, MATLAB.	Precision grinding, CNC machining, milling, lathe, surface grinding, drill press, bandsaw, welding, engineering drawings, tool setup, gauges, measurement instruments, material preparation.	Robotics/automation, reading drawings, failure analysis, data collection/analysis, prototyping, experimental design, statistical analysis, laboratory instrumentation, circuits, technical documentation.
